The subject s procedure was as follows: with her right hand she placed one of the cubes upon the square; then the sweep attached to one arm came around and brushed the cube off the square in the direction of the left hand of the subject. She caught the first cube with her left hand, meanwhile putting the second cube on the square with her right hand. As the second arm brushed off the second cube, she transferred the block just caught in the left hand, to the right hand, placing this block, and again catching the other. This continued for five minutes at a fixed speed which, except for slight variations in the current, was equal to fifteen complete revolutions in twenty-six seconds, or about 346 blocks during the test period. The object of the test was to see how many times...
