Not illustrated. 1802 Excerpt: . . . subject, and treated it in a manner peculiar to his penetrating genius. In performing the process of transfusion, the vein, which is usually chosen for blood-letting, was opened, and a quill, or other tube introduced in a perpendicular direction: the corresponding vein was then pierced in a healthy person, or more frequently in robust animals; and a similar tube was accommodated to the orifice in a slanting way; both tubes were then passed one into another, and thus the blood was gradually transfused; the vein being tied up, as is usual after venesection. This operation is certainly ingenious; but, ns it requires equal judgment and dexterity, we doubt whether it will ever become an useful branch of the healing art, ia the present state of society: nay, i t appears to us, that it cannot be performed with safety, since the introduction of the late inoculations,...
