RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 54 pages. Original publisher: Golden, CO : Solar Energy Research Institute, 1990 OCLC Number: (OCoLC)646810642 Subject: Coal-fired power plants -- Costs -- Tables. Excerpt: . . . TP-3772 salt at 1050 F (839 K), a cold tank for storing molten salt at 550 F (561 K), and a salt treatment and makeup system. The steam generator is composed of preheating, evaporating, superheating, and reheating heat exchangers. The design specifications and the predicted annual performance for the molten-salt central-receiver (MSCR) solar thermal power plant are summarized in Table 2-3. For the CO generation calculation, the avail-2 ability was taken as 90 , a level that is considered reasonable for a future mature system. Table 2-4 shows a breakdown of the costs of the receiver, the tower, the transport piping, the storage facility, the heliostat field (including support structures and controls), the energy conversion system, and the balance of the plant. Also included is the cost of labor for the assembly and installation of each component of the MSCR solar thermal system. The final item is the estimated yearly O and M cost for the system. All of the cost data in the second column of Table 2-4 are in 1977 dollars. They were obtained by applying the appropriate inflation factor to the cost estimates in 1984 dollars provided by Brown (1988), using data published by the U. S. Department of Commerce (West 1988). A detailed breakdown of the system costs and materials is contained in the appendix. Tab e So ar P ant 2-3. Therma1 Power System Design and Per-formance Specifications (Williams et ale 1987) Construction time (years) 3 Net generating capacity...
